

Assessments to Support Whole Child Initiatives

Actionable Assessments and Targeted Instructional Resources

xSEL Labs is now part of the
7 MINDSETS FAMILY!

Make the invisible, visible. xSEL Labs' assessments are easy-to-implement, program agnostic, and directly measure students' social and emotional competencies and needs. Assessment results help educators decide what to teach to whom, and measure student learning in response to instruction.

xSEL Labs assessments provide:

- Baseline data for screening and identifying needs for multi-tiered supports
- Formative data to guide teaching and learning
- Summative data to measure social-emotional skill development over time
- Cumulative data for program evaluation and continuous improvement

Measure Student Competencies

What sets xSEL Labs apart are our competency assessments, where students demonstrate what they know and can do through their responses to interactive tasks, allowing educators to benchmark students, guide instruction, and measure growth. Providing the only direct measure of social and emotional competencies, xSEL Labs' assessments are aligned with the CASEL framework, state guidelines, and evidence-based programs. Our assessments can be used in tandem with many different curriculums and programs.

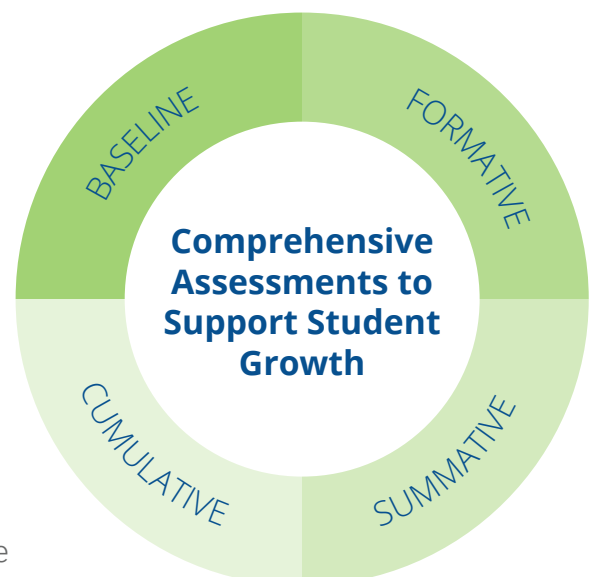

Measure Conditions of Learning

xSEL Labs also offers climate surveys and educator SEL beliefs surveys, both of which measure the conditions for learning. Surveys help guide adult action to create positive conditions of learning and measure change in those conditions.

Comprehensive Assessments and Surveys to Support Student Growth

Assess and Address Social and Emotional Needs with xSEL Labs

K-8 Direct Assessment

SELweb directly assesses critical social-emotional skills. Students demonstrate competency by answering scored questions and performing game-based tasks to measure how well they understand others' emotions and perspectives, solve social problems, and manage emotions.

High School Survey

Our high school survey measures student perception of their own social-emotional competencies, covering the five CASEL domains: self-awareness, self-management, social awareness, relationship skills, and responsible decision-making.

K-12 School Climate Survey

Our K-12 school climate survey provides a snapshot of how students see essential learning conditions, including students' sense of safety, belonging, and instructional support. Climate surveys are administered with our social-emotional competencies assessments to save time for students and educators.

Targeted Instructional Resources

Our assessment reports link to instructional resources for building targeted skills, including quick and simple lessons, alignments to more than 25 evidence-based programs, and strategies for integrating skill-building throughout the day.

Contact Us Today!

If you are looking for reliable and easy-to-use assessments that support educator success and students' social-emotional development, xSEL Labs can help. To learn more or request a demo, visit www.xsel-labs.com or call us at (855) 847-9735.

About xSEL Labs

xSEL Labs, a 7 Mindsets solution, partners with K-12 schools and districts across the country to assess and address social and emotional learning (SEL) outcomes. Its core assessment, SELweb, is a reliable and easy-to-use direct assessment of the social and emotional competencies that are reflected in the CASEL framework, state standards, and evidence-based SEL programs. Schools and districts use xSEL Labs' SEL assessment data to guide teaching and learning, SEL program outcome evaluation, baseline needs assessment, and universal screening for multi-tiered supports.
